NET CHECK

SERBIA'S BEST MOBILE NETWORK

Mobile networks can be compared in terms of quality through a combined assessment of accessibility, reliability, and quality of typical telecommunication services.

The results of an extensive and complex testing procedure are translated into ranking points and the ranking result reflects the overall end-user experience.

With an overall score of 940.75 points, Telekom Srbija / mts achieved the highest score, followed by A1 and then Yettel.

BENCHMARKING METHODOLOGY

NET CHECK pairs engineering expertise with statistically rigorous methodologies in order to collect data on mobile network performance.

The focus is on precise, unbiased and balanced comparison between different mobile networks.

Different levels of service are evaluated, ranging from basic functionality to full technology potentials.

The needed amount of data is obtained through extensive drive testing in numerous cities various in size and along roads connecting them.

The Benchmarking Methodology is updated once a year, staying on top of the industry trends.

MEASUREMENT EQUIPMENT

SwissQual Smart Benchmarker produced by the market leader Rohde & Schwarz was used. The measuring equipment was placed in the roof box of a passenger car, executing predefined voice and data service testing sequences.

The mobile phones that are a part of the measuring system were cooled down to avoid overheating due to sun and extensive use.

For all tests current models of Samsung Android smartphones were used.

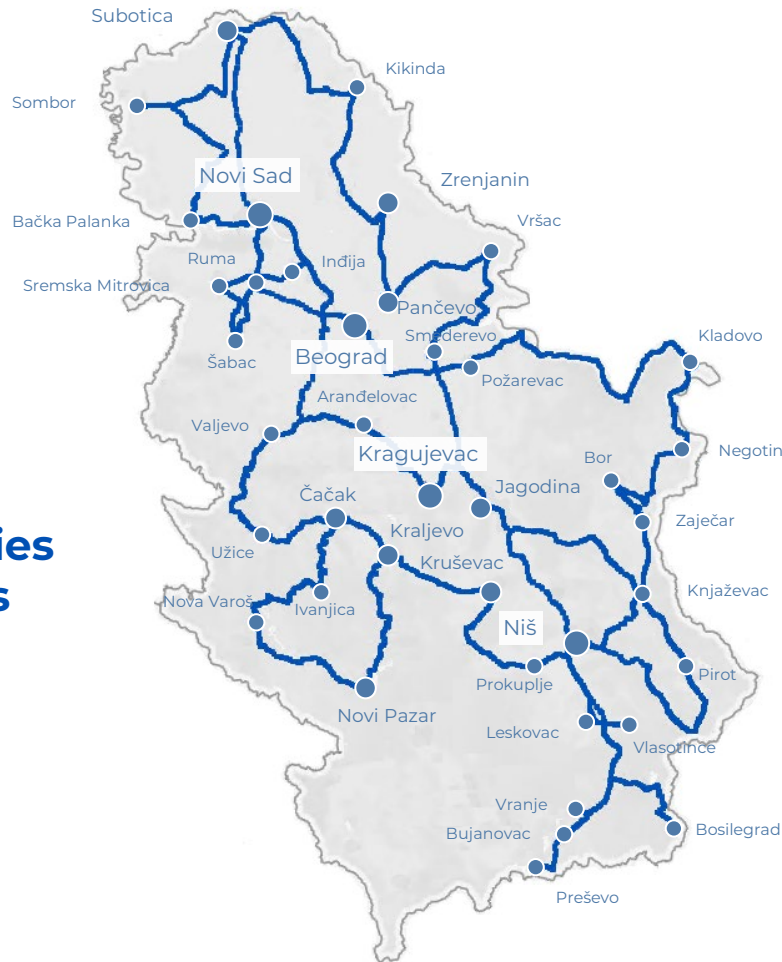

This approach allows for simultaneous performance measurement off all available mobile networks in the same locations.
